Extend Stripping Cycles from 18 to 36 months with

Extended Performance

Floor Finish

Timeless Performance from NCL!

If you are stripping your floors too frequently, you are wasting valuable time and maintenance dollars. 24/7® from NCL is based on amazing new technology that dramatically improves the durability and long term performance, extending the time between stripping cycles from 18 to 36 months.

Micro Molecular Technology

24/7® incorporates the latest exclusive Micro Molecular Technology, designed for long term, ultra-high gloss, wet-look performance. Typical floor finish polymers have a wide distribution of particle sizes ranging from small to large. Micro Molecular Technology polymers control the particle size to keep it very small to form a high density, very tight, consistent film with exceptionally high gloss that resists dirt penetration for extremely high performance. Micro Molecular Technology gives 24/7® superior durability, resistance to dirt penetration, excellent color stability and outstanding burnish response to outperform conventional floor finishes and reduce overall maintenance costs.

- A superior coating that achieves an initial wet look gloss without polishing.
- Excellent for use in both buff or no-buff programs.
- Ideal for areas that receive a minimum of maintenance.
- Low odor formula is ideal for use in schools, universities, hospitals and nursing homes.

Floor Coating and Finishing Material
As To Slip Resistance Only

How does 24/7® extend the time between stripping cycles?

- **Abrasion, scuff and scratch resistant**

Exclusive polymer technology results in a high density, very tight film that resists scuffing, scratching and abrasion from traffic and burnishing.

- **Stands up to routine cleaning**

Regular routine maintenance with NCL ENHANCE Neutral Cleaner will not damage, dull or remove 24/7®.

- **Super clear formula does not darken over time**

Ordinary finishes turn yellow or darken over time, resulting in the need to prematurely strip before the finish is worn out.

- **Resists dirt penetration and embedment**

24/7® creates an extremely consistent surface that resists dirt penetration and embedment to stay clean looking for an exceptionally long time.

- **Excellent scrub and re-coat ability**

Top scrubbing with NCL QWIK-SCRUB and re-coating with 24/7® restores the floor surface extending the time between stripping cycles.

Save time, labor and money by scrubbing and re-coating instead of stripping.

High Solids Formulation

24/7® is a high solids formulation that achieves its ultimate gloss from fewer coats of finish application, saving product and labor costs. Achieve maximum gloss & durability with only 4 coats.

Extend Stripping Cycles From 18 To 36 Months.

24/7® is an ideal product for high traffic environments where frequent stripping is required. Unique durability and excellent scrub and re-coat ability extend the time between stripping cycles.

Highest "Off-The-Mop" Gloss

24/7® is a superior coating that achieves an initial wet-look gloss without polishing.

* For each 1,000 sq. ft. scrubbed and re-coated compared with stripping save \$48.00 in chemical and labor cost.
